TO-DAY'S DRUGS

A book under this title will be published in December 1964. It is based on a series of review articles which were printed in the "To-day's Drugs" section of the *British Medical Journal* between January 1963 and May 1964. These articles have been edited and brought completely up to date so as to form an authoritative and practical guide to modern therapeutics. The book is designed to cover the drug treatment of those common conditions which are met with in general and hospital practice. There are important sections dealing with antibiotic therapy, cardiovascular conditions, rheumatic disorders, oral contraceptives, and the special problems involved in paediatric and geriatric prescribing. Special attention has been paid to the precautions which should be taken in using these drugs and their toxic and side-effects. This book should be of value to all doctors concerned in the day-to-day treatment of patients.
